

# Step in the right direction

Reduce the threat of contamination with Anti-contamination Stepping Plates.

## Maximise the opportunity to preserve and collect evidence.

For many years Forensic Science has been proactive in identifying “obvious evidence” at crime scenes. However with significant advances, it is now possible to detect evidence which is not only extremely delicate, but also invisible to the naked eye. It is now standard to use Stepping Plates at all major scenes in order to create a pathway through a scene thereby ensuring a methodical, clinical approach to the preservation and gathering of trace evidence.

Our award winning transparent Anti-contamination Stepping Plates are available in two sizes and in a range of kit combinations dependent upon client need.
