

- Break off the top with the plastic ampoule breaker
- Coat the spatula (0.003-0.005 gr) with the suspected material.
- The reaction will take place within seconds
- Compare the color of the liquid in the ampoule with the color printed on the ampoule by holding the ampoule horizontal.
- When presumptively positive the colors should be:

**Mephedrone
(4-MMC)**

3-MMC

MDPV

Methylone

a-PVP

- *Note: there might always be some variation in the color reactions due to the composition of the compound.*
